Larger builds may benefit from having several independent circuits so the lighting can be customised for each room or area. Let's take a look at some internal lighting ideas for your builds.

### 1 FLOOR LIGHTING

Floor lighting is a stylish alternative to wall or ceiling lights and works well in bathrooms and kitchens. It's powered by redstone hidden underneath the floor blocks.

### 2 SECURITY LIGHTING

In external areas your lighting can be connected to a tripwire or to pressure plates. The system will be activated when mobs or enemy players trespass on your land, providing effective security lighting.

### 3 AUTOMATIC LIGHTING

For ultimate convenience, try an automatic lighting system. It's controlled by daylight sensors placed on the roof so there's no need for levers or buttons – it'll come on as soon as the sun sets.

#### TIP

For permanent under-floor lighting, replace the redstone circuitry with a simple redstone torch under each lamp.
